Subject: Cost Index – 2006 Third Quarter

- The average Excavation cost was \$2.75/CY, up \$0.03/CY from the third quarter of 2005. One project was considered this quarter.
- The Reinforcing Steel cost was \$1.13/lb, up \$0.27/lb from the third quarter of 2005. One project was considered this quarter. Bid prices for steel have been fairly stable. We are just now being affected by steel price increases documented in the Engineering News Record over the last 6 months. Other Steel publications indicate that steel prices will now begin to fall.
- The Structural Concrete cost was \$480.03/CY, up \$150.87/CY from the third quarter of 2005. One project was considered this quarter. The quantities for this project were very small, which is probably why the price is so high.
- The average Plant Mixed Bituminous cost was \$37.59/ton, up \$0.54/ton from the third quarter of 2005. Three projects were considered. A larger increase was expected this quarter. It seems likely that one of the projects considered benefited from Contractor's ability to store oil bought when prices were lower.
- No data is available for Structural Steel and Concrete Pavement.

**The Minnesota Highway Construction Composite Cost Index was not computed for the third quarter of 2006, due to the absence of data for two of the indicator items. Without a unit price for each indicator item, the resulting index is not comparable to previous indices.** Third quarter, 2006 project information is compared to third quarter 2005 below. The third quarter information is based on \$5.44 million of work considered from 3 projects.

The average number of bidders per project was 5.4 for the third quarter of 2006. In comparison, the average number of third quarter bidders in 2005 and 2004 were 3.5 and 3.4 respectively

Attached is an explanation of the derivation of the Minnesota Cost index, charts of quarterly and annual Minnesota highway construction cost trends and a table and chart comparing the yearly Minnesota Composite Cost Index with the latest yearly FHWA Index.

# Minnesota Construction Cost Index

The Minnesota Construction Cost Index is an indicator of price trends for highway construction.

It is composed of six indicator items: roadway excavation, to indicate the price trends for all roadway excavation; concrete pavement and plant-mixed bituminous, to indicate the price trend for all surfacing types; and reinforcing steel, structural steel, and structural concrete, to indicate the price trend for structures.

Each quarter, an average unit price is computed for each indicator item. The unit price is based upon the actual bids from projects **excluding Design Build projects**, costing more than \$100,000, and let during that quarter. These unit prices include the cost of material, labor, equipment, overhead and profit.

These unit prices along with the 1987 base unit prices and quantities are used to compute the Excavation, Surfacing, Structures and Composite Index.
