Minnesota Construction Cost Index

The Minnesota Construction Cost Index is an indicator of price trends for highway construction.

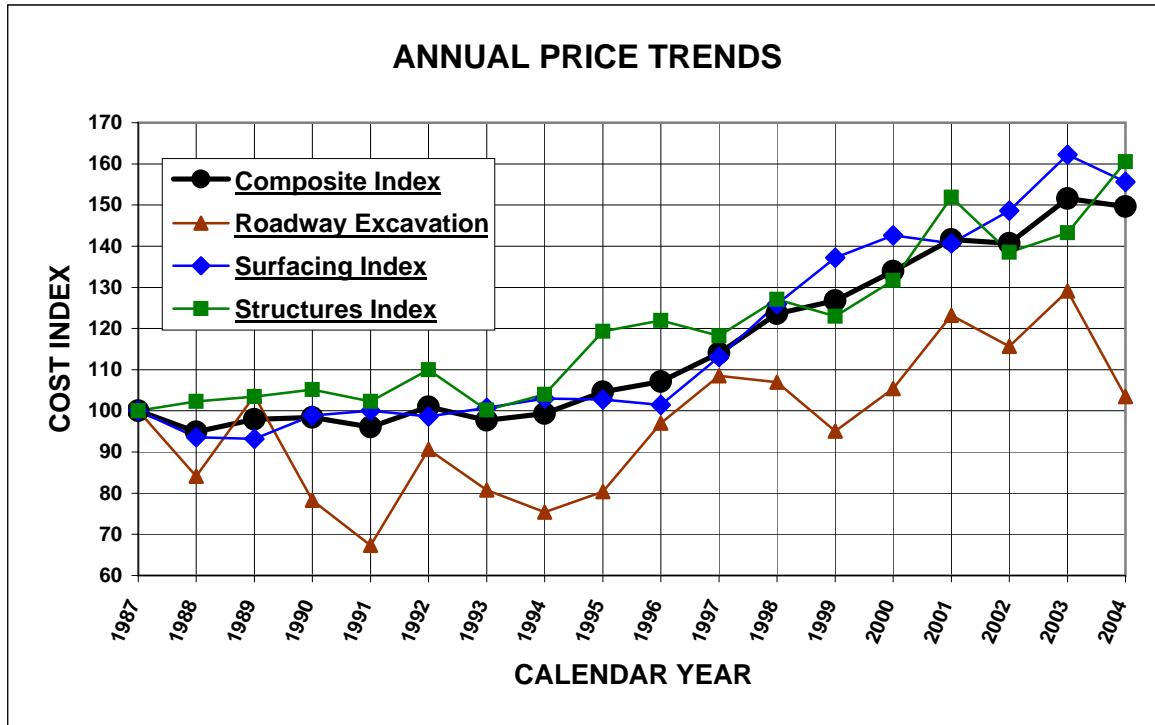

It is composed of six indicator items: roadway excavation, to indicate the price trends for all roadway excavation; concrete pavement and plant-mixed bituminous, to indicate the price trend for all surfacing types; and reinforcing steel, structural steel, and structural concrete, to indicate the price trend for structures.

Each quarter, an average unit price is computed for each indicator item. The unit price is based upon the actual bids from projects **excluding Design Build projects**, costing more than \$100,000, and let during that quarter. These unit prices include the cost of material, labor, equipment, overhead and profit.

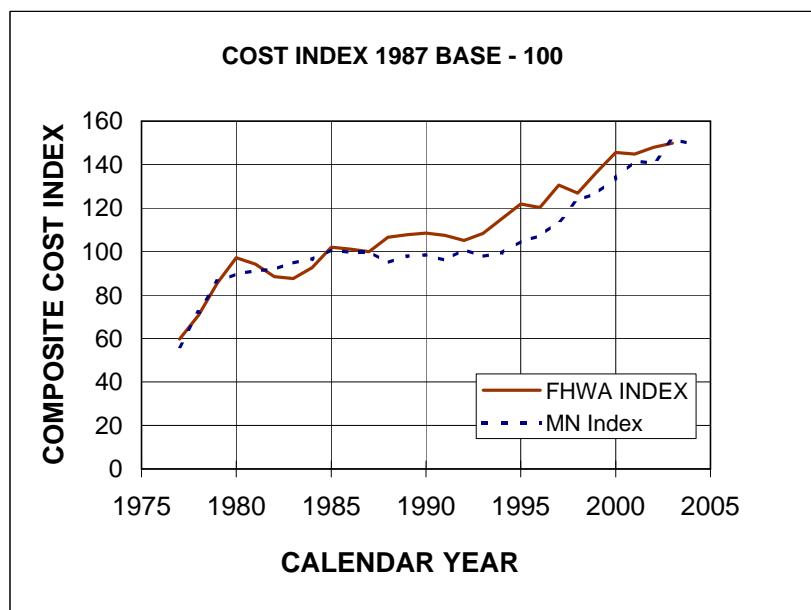

These unit prices along with the 1987 base unit prices are used to compute the Construction Cost Index. Additionally, the 1987 quantities are used to combine these indices as shown above into an excavation index, a surfacing index, a structures index and a composite index.
