Import photos from iPad to PC

The iPad charger cord doubles as the PC connection cord. Unplug the cord from the transformer (that plugs into electrical socket). The cord end is a USB that can plug into a PC.
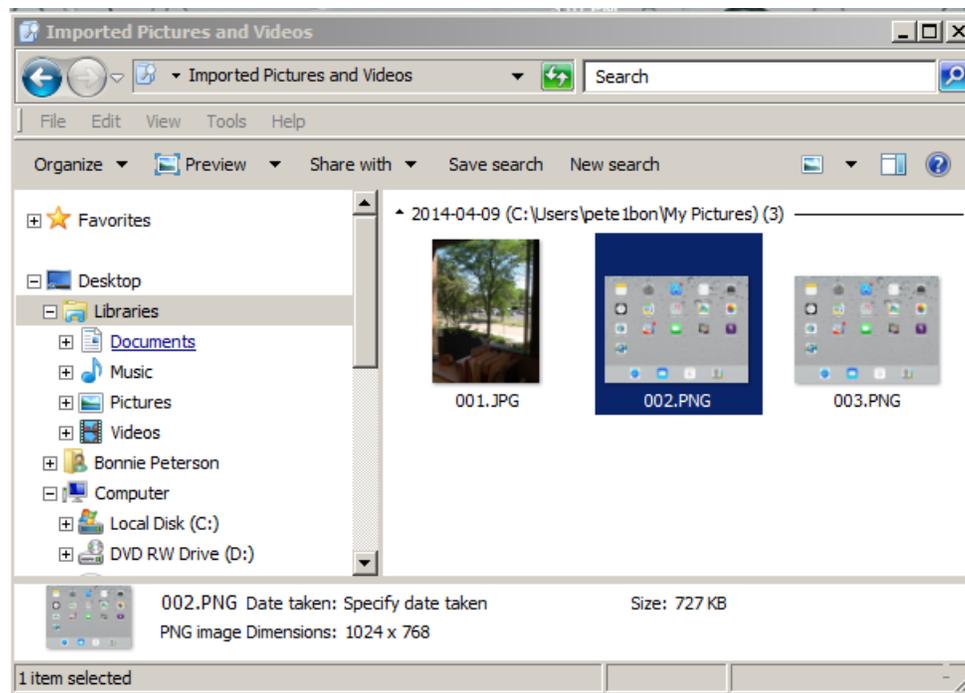

Plug the USB into the PC.

- The iPad asks if you "Trust" the PC – you must choose trust before you can transfer photos.

When the AutoPlay box appears on the PC:

- Choose "Import pictures and videos using Windows".
- Browse to the directory to save them in.

Take a screen shot of the iPAD screen:

- Press and hold the button on the front of the iPad frame (it has a rounded square icon on it).
- While holding the button, quickly press the on/off switch (on the narrow edge of iPad, opposite the button).
