

Overview

Beginning in early June 2010, the Minnesota Department of Transportation, in a partnership with Mille Lacs County, will construct a \$5.9 million project that will improve safety, mobility and roadway access in the city of Princeton.

The project includes reconstructing the Highway 95 bridge over the Rum River, the Mille Lacs County Road 29 bridge over the west branch of the Rum River and a new single lane roundabout where Highway 95 and Mille Lacs County Road 29 intersect.

Crews plan to first construct the two bridges. The roundabout work is scheduled to begin in the fall.

Traffic will be detoured for the duration of this project. Both roadways are scheduled to open to traffic in November.

In spring 2011, crews will return to complete landscaping and permanent road markings.

Tips on Driving a Roundabout

- 1 To enter, slow down and stop for pedestrians in crosswalks and traffic in the roundabout
- 2 Proceed slowly and merge safely. Once you are in the roundabout, you have the right-of-way
- 3 To exit, turn right and be prepared to stop for pedestrians in crosswalk

For more information on roundabouts go on the web at www.dot.state.mn.us/roundabouts/

Detours

Work on this project will require road closures and detours.

Highway 95 traffic will be detoured around Princeton via Highway 169, and Mille Lacs County Highways 13 and 1 around Princeton.

Mille Lacs County Road 29 traffic will be detoured via Mille Lacs County Hwys 31 and 39 in Princeton.

We're in this Together

Our goal is to maintain safety and mobility for the city of Princeton residents, employees and visitors during construction.

Motorists are urged to slow down, pay attention and watch for workers while following the detours or traveling near the construction zone—for your safety and for ours.

Stay Involved & Informed
