Ultra-Ever Dry

Ultra-Ever Dry is a super hydrophobic (water) coating that will repel most water-based and some oil-based liquids. Ultra-Ever Dry uses proprietary technology to coat an object and create a surface chemistry and texture with patterns of geometric shapes that have “peaks” or “high points”. These high points repel water, some oils, wet concrete, and other liquids from pooling. The Metro district is planning to use this product in the Lowry Hill Tunnel to see if it reduced the amount of dirt and grim accumulating on the wall tiles. If successful, it may reduce the total duration it takes to wash the tunnel and possibly lower the number of washings per year.
