Minnesota Snow and Ice Field Manual

NTREC/MOR contributed to the compiling and writing of this manual. In it are the latest ideas, improvements, and best practices for snow and ice control. County, city, state, and others will benefit from this important updated book.

Learn when to use pre-wetting, anti-icing, or pre-treating for material application. Read what you can do to reduce your costs and still provide the necessary service level. This will reduce environmental impact from snow and ice control practices.
