Mud Cannon

The Mud Cannon undercarriage cleaner can be hooked up to any pressure washer hose for various cleaning applications. The durable stainless steel mosmatic swivel and spray bar comes with a four-nozzle rotating assembly which is approximately 24 inches wide. The Mud Cannon also has a telescopic handle to assist getting at hard to reach places under the truck to remove sand, salt and oil that could damage the undercarriages of vehicles. Adam Miller (district 6) demonstrates how easily the Mud Cannon is used to clean under his plow truck. Adam also mentioned that “The mud cannon should help us maintain our trucks and equipment better by removing more salt and sand from the undercarriage, which will prevent rust from developing”.
