

How to Enable Macros in Excel 2013

To run macros from MnDOT Pavement Engineering, Excel should be set to display a notification when macro workbooks are opened for the first time (see Figure 1)

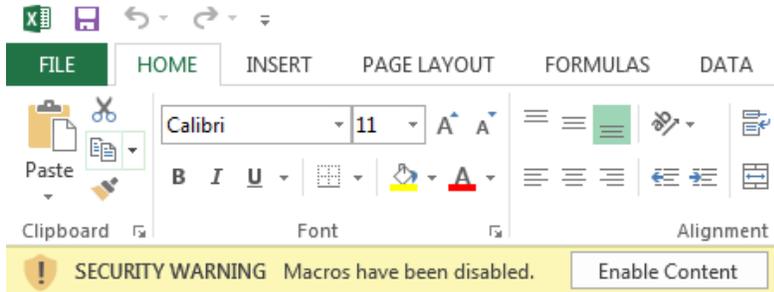

Figure 1

When you click **Enable Content**, macros will be enabled for this file.

If you do not see a security warning, and you get an error when you click on a button, follow these steps to enable security warnings:

1. Click on the **File** tab in the upper left corner (see Figure 1).
2. In the green bar at the left, click on **Options** (see Figure 2).
3. In the left menu, click **Trust Center** (see Figure 3).
4. Click the **Trust Center Settings** button on the right.

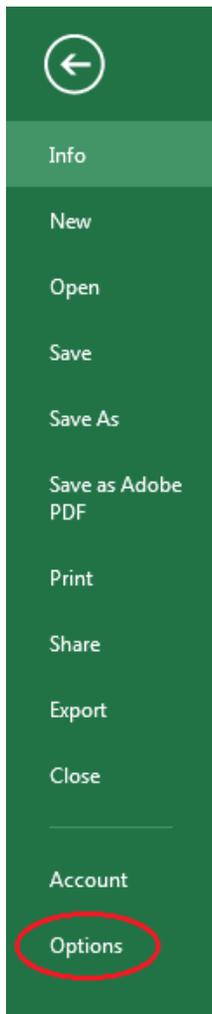

Figure 2

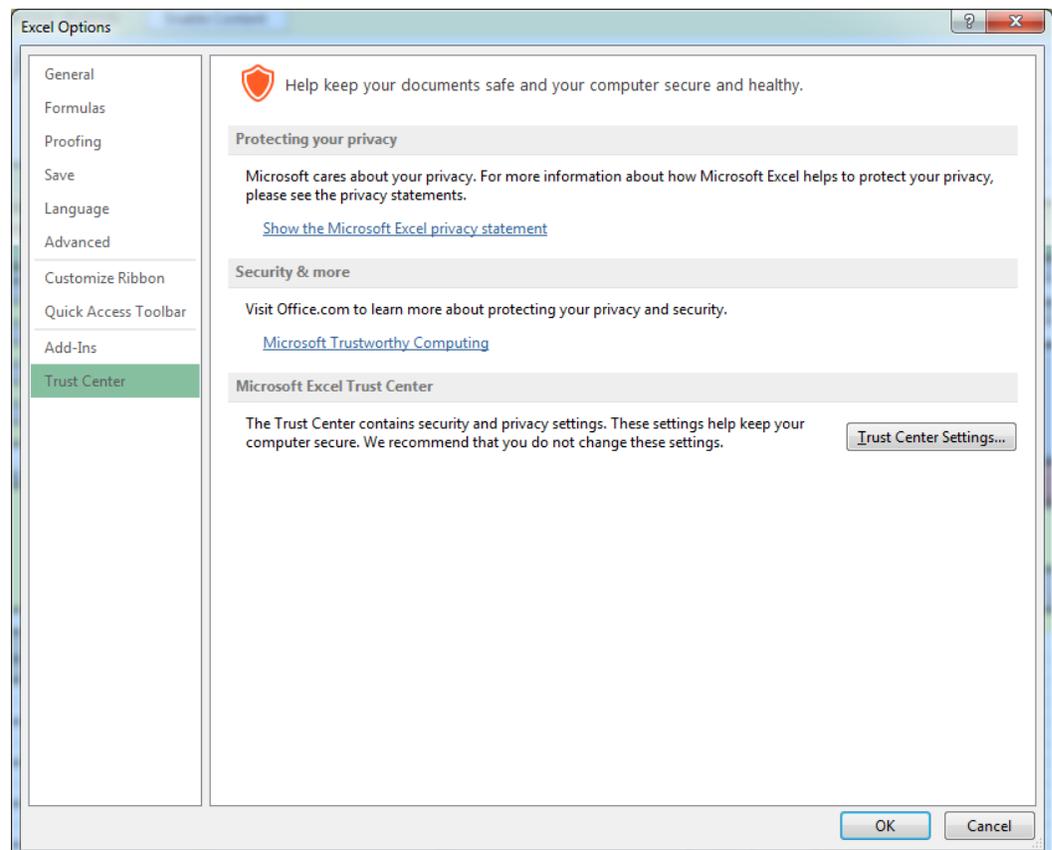

Figure 3

5. Under **Macro Settings**, select the 2nd option, **Disable all macros with notification** (see Figure 4).

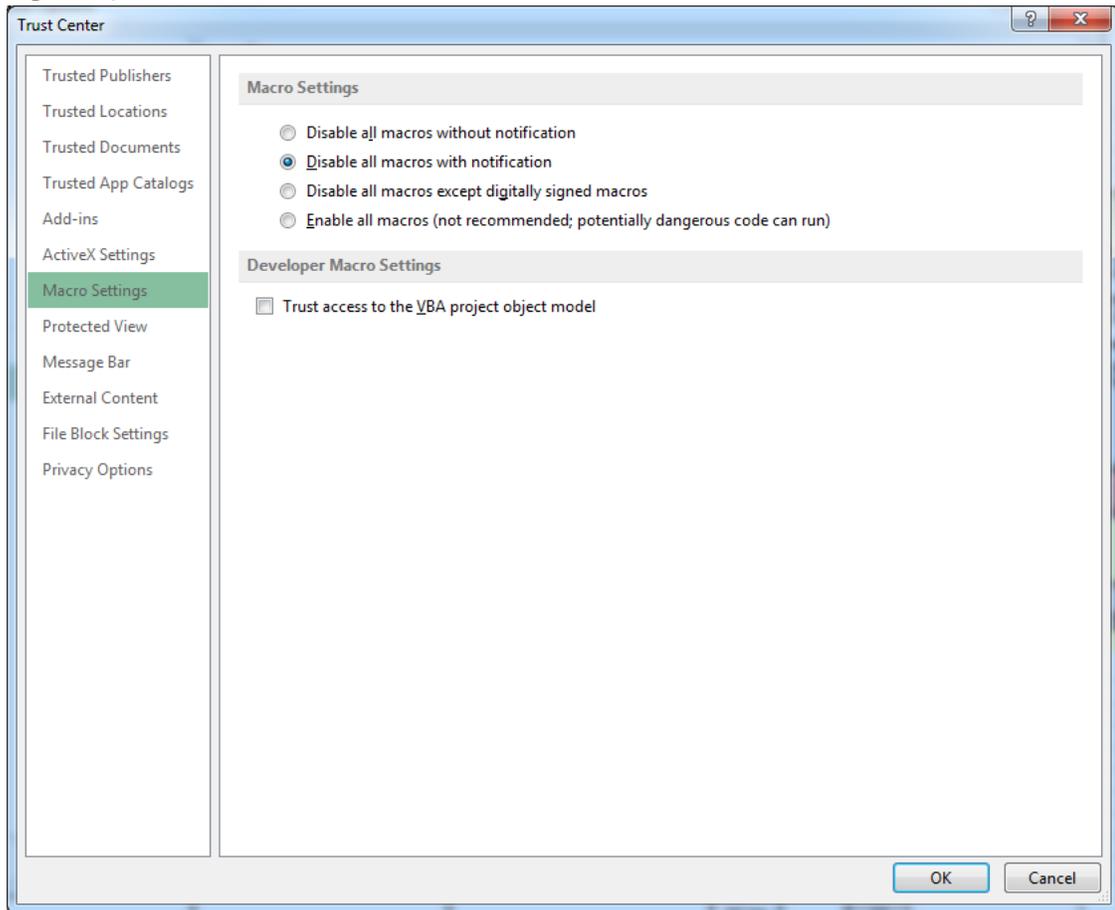

Figure 4

6. Click **OK** twice to exit **Options**.
7. Close and re-open the macro workbook. Click **Enable Content** (see Figure 1).
