

Uploading and Downloading Large Files from the MnDOT Managed File Transfer (MFT) Site Using FileZilla

1. Download the FileZilla SFTP platform

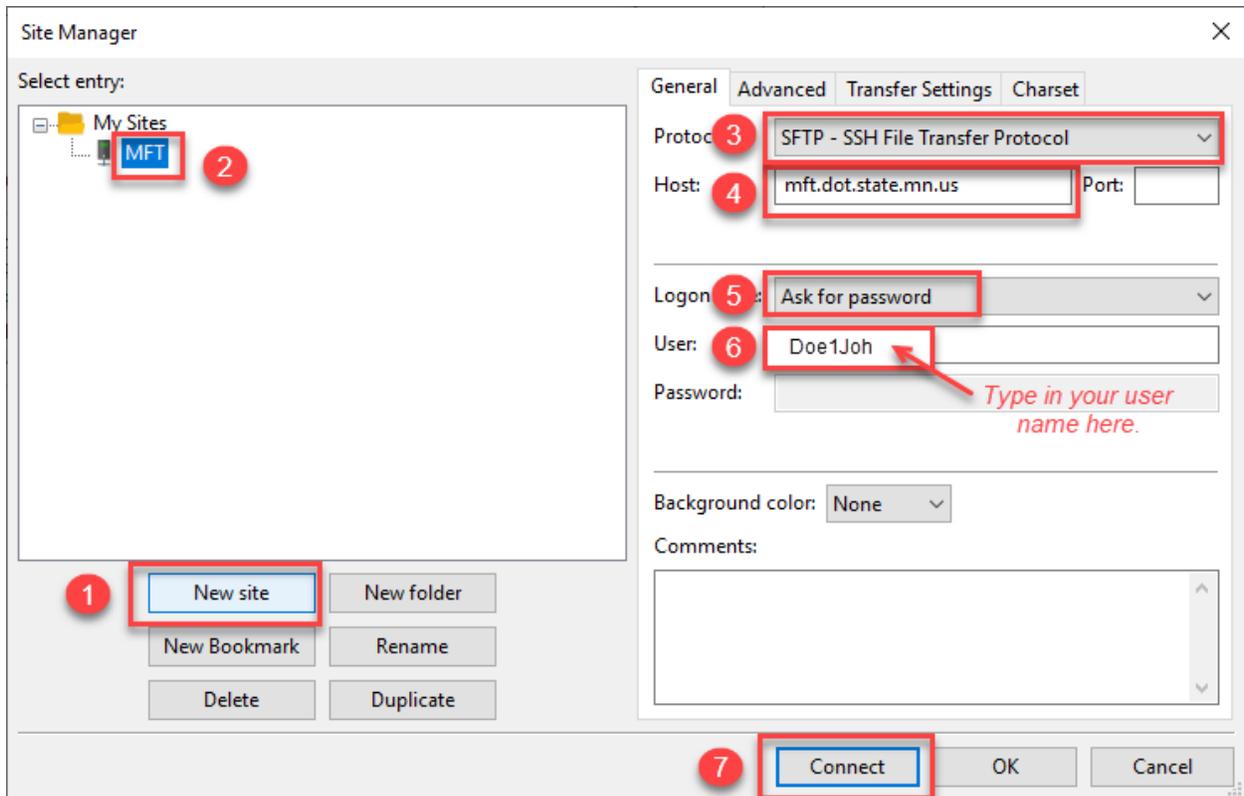

MnDOT employees can download this software directly from the software center on your computer without going through MnIT. See snapshots below. External users can use an SFTP platform other than FileZilla if desired.

2. In FileZilla open Site Manager

3. Complete the steps in the image below. Do not save your password as this may cause problems when your password changes in the future when trying to update it.

4. To open FireZilla in Future: Open SiteManager (step 2 above) and select "**Connect**" located at the bottom of the panel.
