

Risk Consultant Services Available

Services for **Risk Management**, a framework for managing uncertainty through participation, communication, and strategy, are now available in-house at Mn/DOT through the Office of Policy Analysis, Research and Innovation.

Why Risk Management at Mn/DOT is important

We all know transportation can be risky business, filled with uncertainty. For this reason, Risk Management is already central to business activities at Mn/DOT.

Risk Management involves the following deliberate steps: identification, assessment, planning and mitigation, allocation of resources, and on-going monitoring. This can be accomplished formally or informally.

Realizing decisions through the Risk Management lens can help create awareness, cooperation and understanding about decisions.

The list of risks will exist whether we like it or not. The difference is how we manage it along the way.

Risk Management at Mn/DOT... **Check into it!**
