

Advanced CORSIM Training Manual

final corsim manual 9-19-09.doc

Minnesota Department of Transportation

SEH No. A-MNDOT0318.00

January 31, 2008
Updated May 27, 2004

Table of Contents

	Page
1.0 Chapter 1 – Modeling Process.....	1
1.1 Manual Purpose.....	1
1.2 CORSIM Model.....	2
1.3 The Modeling Process.....	2
1.3.1 Goals of a Good Modeling Process.....	4
1.4 Model Support Information On-line.....	4
2.0 Chapter 2 – Project Scoping.....	5
2.1 Scoping Steps.....	5
2.1.1 Step 1: Identify Project Purpose and Need.....	5
2.1.2 Step 2: Identify Limits of Analysis.....	6
2.1.2.1 Influence Areas.....	6
2.1.2.2 Boundary Conditions.....	6
2.1.2.3 Choosing Model Time Periods.....	9
2.1.3 Step 3: Select Model.....	9
2.1.4 Step 4: Estimate Data Collection Requirements.....	10
2.1.5 Step 5: Estimate Level of Effort.....	10
2.1.6 Step 6: Sensitivity Analysis.....	10
2.2 CORSIM Modeling Schedule.....	11
2.2.1 Pitfalls in Modeling Process.....	11
3.0 Chapter 3 – Data Collection.....	13
3.1 Base Mapping.....	13
3.2 Field Review.....	13
3.3 Traffic Volumes.....	13
3.3.1 Instrumented System.....	14
3.3.2 Un-Instrumented System.....	15
3.3.3 Intersection Turning Movement Counts.....	15
3.3.4 Balancing Counts.....	15
3.4 Speed Studies.....	17
3.5 Queue Observations.....	18
3.6 License Plate Origin-Destination Studies.....	18
4.0 Chapter 4 – Base CORSIM Model Process.....	20
4.1 Base CORSIM Modeling Process Overview.....	20
4.1.1 Long-Term Benefits to a Standardized Process.....	20
4.1.2 Model Development Steps.....	21
4.2 Part I: Link Node Diagram Development.....	22
4.2.1 Freeway Node Location Criteria.....	25

Table of Contents

4.2.2	Arterial Node Locations.....	34
4.2.3	Interface Nodes.....	34
4.2.4	Node Numbering Criteria.....	35
4.2.4.1	Adding to an Existing Model.....	36
4.2.5	Typical Link Node Diagram Concepts.....	36
4.2.6	Lane Schematic Development.....	44
4.3	Part II: Freeway Coding.....	47
4.3.1	Step 2: Code Freeway Mainline Nodes (Direction 1).....	47
4.3.2	Step 3: Connect Freeway Ramp Nodes (Direction 1).....	48
4.3.3	Step 4: Code Freeway Ramp Nodes (Direction 1).....	48
4.3.4	Step 5: Connect Freeway Ramps with Freeway Mainline (Direction 1).....	49
4.3.5	Step 6: Code Physical and Operational Characteristics (Direction 1).....	50
4.3.6	Step 7: Code Peak Hour Traffic Volumes (Direction 1).....	51
4.3.7	Step 8: Translate and Run Direction 2 of the Model.....	52
4.3.8	Step 9: Repeat Steps 2-8 for Direction 2 of the Model.....	52
4.3.9	Step 10: Repeat Steps 2-8 for Intersecting Freeways.....	52
4.3.10	Step 11: Combine Freeway Submodels.....	52
4.3.11	Step 12: Create QA/QC Worksheet.....	54
4.3.12	Step 13: Coding Origin-Destination Information.....	55
4.3.12.1	Creating an O-D Matrix.....	56
4.3.12.2	Calculating O-D Percentages.....	56
4.4	Part III: Base Arterial Model Development Steps.....	57
4.4.1	Step 1: Create a Synchro Model of the Ramp Terminal Intersection.....	58
4.4.2	Step 3: Update Signal Timings.....	60
4.4.3	Step 4: Transfer Synchro File to CORSIM.....	61
4.4.4	Step 5: Run Synchro Generated CORSIM File.....	61
4.5	Part IV: Combining Freeway and Arterial Models.....	62
4.5.1	Step 1: Combine Freeway and Arterial *.TRF Files.....	62
4.5.2	Step 2: Connect the Two Models in TRAFED.....	63
4.5.3	Step 3: Run Combined Model.....	63
4.5.4	Step 4: Finalize QA/QC.....	63
4.5.5	Step 5: Develop Input for Multiple Time Periods.....	64
4.5.6	Step 6: Run Model.....	68
4.5.7	Step 7: Summarize MOE Outputs.....	68

Table of Contents

5.0	Chapter 5 – Model Organization & Review of Inputs.....	71
5.1	Organization of Model Data.....	71
5.2	Review of Physical Inputs.....	74
5.2.1	Physical Input Review – Freeways.....	74
5.2.2	Physical Input Reviews – Arterials.....	75
5.3	Review of Traffic Volume Inputs.....	75
5.3.1	Traffic Volume Inputs Freeway.....	75
5.3.2	Traffic Volume Inputs Arterial.....	75
6.0	Chapter 6 – Calibration Process.....	76
6.1	Causes of Congestion.....	76
6.2	Calibration Approach.....	78
6.2.1	Step 1: Modification of Known Global Parameters.....	78
6.2.1.1	Headway Distribution.....	78
6.2.1.2	Fleet Information.....	78
6.2.2	Step 2: Modification of Local or Link Length Parameters.....	80
6.2.2.1	Adjust Warning Sign Location for Exit Ramps and Lane Drops.....	81
6.2.2.2	Adjust Free Flow Speeds/Headway Factors.....	81
6.3	Model Run Parameters.....	81
6.4	Statistical Evaluation Process.....	82
6.4.1	Calibration Testing Process.....	82
6.5	Global Changes – Unknowns.....	84
7.0	Chapter 7 – MOEs and Reports.....	85
7.1	Tabular Summaries.....	85
7.1.1	Tables Summarizing Model Results.....	85
7.1.2	Comparative Summary Tables.....	88
7.2	Graphical Summaries.....	89
7.3	Final Documentation.....	92
7.3.1	Model Manual.....	92
7.3.2	Technical Memorandums.....	93
7.3.3	Freeway Study Report.....	93
7.3.4	Interstate Access Request.....	94
7.3.4.1	IAR Policy Requirements.....	95
7.3.4.2	Basic Information for Traffic Analysis of Added Access to Interstate.....	98

Table of Contents

8.0	Chapter 8 – Alternatives Analysis.....	99
8.1	Alternative Analysis Overview.....	99
8.2	Alternative Screening Process.....	101
8.3	Alternative vs. Scenarios.....	101
8.4	Base Alternatives Required for Interchange Access Requests.....	101
8.5	Sensitivity Testing.....	102
8.6	Forecasting Traffic.....	102
	8.6.1 Time Periods for Future Traffic Demand.....	103

List of Tables

Table 1	Standard Acceleration and Deceleration Lane Lengths.....	26
Table 2	Design/Operating Speed by Radius.....	27
Table 3	Node Numbering Criteria.....	35
Table 4	Causes of Congestion.....	77
Table 5	Interstate Access Request Analysis Requirements.....	102

Table of Contents

List of Figures

Figure 1 – Modeling Process Flow Chart.....	3
Figure 2 – Out-State Modeling Limits.....	7
Figure 3 – Metro Modeling Limits.....	8
Figure 4 – Modeling Time Periods Sample.....	9
Figure 5 – CORSIM Modeling Schedule.....	12
Figure 6 – ADR Detector Legend.....	15
Figure 7 – Data Plot Sample-Evaluating Detector Value.....	16
Figure 8 – Speed Study Graphic-PC Travel.....	17
Figure 9 – Speed Study Sample-Manual Technique.....	18
Figure 10 – Link Node Diagram.....	23
Figure 11 – Lane Schematic.....	24
Figure 12 – Ramp Junction Node Location.....	25
Figure 13 – Node Location Requirements for Ramp Influence Area.....	26
Figure 14 – First Ramp Node Detail.....	29
Figure 15 – Interface Link Schematic.....	34
Figure 16 – CORSIM Coding for Standard Diamond Interchange.....	38
Figure 17 – CORSIM Link Node Diagram Sample: Diamond Interchange.....	39
Figure 18 – Single Point Interchange Node Diagram Sample.....	40
Figure 19 – Freeway Bifurcation Coding Sample.....	41
Figure 20 – Collector-Distributor Road System Coding Sample.....	42
Figure 21 – HOV Bypass Lane at Typical On Ramp Coding Sample.....	43
Figure 22 – Lane Schematic Lane Numbering Criteria.....	45
Figure 23 – Lane Schematic Sample.....	46
Figure 24 – CORSIM Model Structure by Record Type.....	53
Figure 25 – Sample QA/QC Form.....	54
Figure 26 – Weave Volume Illustration.....	55
Figure 27 – Sample Origin-Destination Calculation Worksheet.....	56
Figure 28 – Synchro Layout .DAT Sample File.....	60
Figure 29 – Multiple Time Period Model Structure.....	65
Figure 30 – Sample Freeway Volume Database Structure.....	66
Figure 31 – Sample Intersection Volume Database Structure.....	67
Figure 32 – Sample MOE Report Freeways.....	69
Figure 33 – Sample MOE Report Arterials.....	70
Figure 34 – Model Manual File Structure.....	72
Figure 35 – CORSIM Model Fleet Information Codes.....	79
Figure 36 – Anticipatory Lane Change Parameter Illustration.....	81

Table of Contents

Figure 37 – Sample Statistical Calculations and Graph.....	83
Figure 38 – Sample FRESIM MOE Summary Report.....	86
Figure 39 – Sample NETSIM MOE Report Table.....	87
Figure 40 – Alternative Analysis Screening Process.....	100

List of Appendices

Appendix A	General Modeling Guidelines
