

# J-turns versus interchanges

J-turns allow MnDOT to use funding wisely and address safety issues!

## BUILD TIME

### J-turns

Time to build: 1 year

Quickly addresses safety issues

### Interchanges

Time to build: 3+ years

Significant impacts and costs to build

Cost is a factor in all decisions we make. We must spend tax dollars wisely.

MnDOT can build  
**5 - 10 J-turns**

for the same cost as  
**1 interchange**

J-turns are a cost-effective solution to reduce serious and fatal crashes.
