Item #	Information Requested	Answer
8.0	Sander - Make and Model	HI-WAY Stainless Steel 2020XT
	Auger size	NONE - - CONVEYOR TYPE
	Type of Sander	V-BOX SPREADER

Standard 82" wide easy service body is constructed of a 10-gauge nopper and stakes with 7-gauge longills and bolt-in replaceable conveyor bottom panel. (Stainless steel units are constructed of a 12-gauge hopper and stakes with 10-gauge conveyor bottom panel and longills.)

Equipped with 2 hydraulic motors. One motor is mounted to the gear case; the other motor provides power to the spinner disc. No other hydraulic components are

24" wide roller-type chain conveyor with 3/8" X 1-1/2" crossbars. This conveyor is driven by a 6:1 reduction spur gear drive with a hi-torque/low-speed hydraulic motor (highest efficiency-98% for lower operational and

Fully enclosed spinner hopper with two internal deflectors and a 20" diameter hydraulically driven spinner disc with six bolt-on harden fins and four baffles designed for complete control of material application.

Prior to painting, all components are chemically cleaned. Upon completion of the cleaning process, all exposed seams not welded are chemically sealed. All components are then double coated with a lead- and chrome-free plural-component epoxy primer. Bolt-on components are painted Hi-Way black urethane, oven-cured and assembled. 304 stainless steel units are unpainted (non-304 stainless steel components are painted black)

All units are topped with a black decal group.

Note: For proper operation, hydraulic system requires 15-18 GPM at 1500 PSI for series system, and 20-25 GPM at 1500 PSI for dual system.

Item #	Information Requested	Answer
8.0	Sander - Make and Model	HI-WAY XT3 TYPE III
	Auger size	NONE - - CONVEYOR TYPE
	Type of Sander	HYDRAULIC DUMP/SPREADER

The XT3 type III body is designed to function as a traditional dump body and as a center conveyor discharge through the tailgate. As a standard rear conveyor discharge, the 25:1 planetary drive is located at the rear of the body/conveyor. The conveyor feeds material through the adjustable feedgate, located within the tailgate, and is directed to the spinner through a chute assembly under the apron. The tailgate is double acting and will lay substantially flat for hauling brush and like items. The head sheet is flat with an internal doghouse that houses the trunnion mounted

95.5" width for maximum capacity.

The design of the side sheet/floor shall be such that the vertical surface (side wall) transforms into a horizontal surface (floor) through a large radius. This design will provide a 42" flat surface of the dump body floor allowing for the transportation of palletized materials, barrels, sign posts and other like items.

7-gauge 304 stainless steel sides and ends (85,000 psi tensile/35,000 psi yield strength). The side sheets, endgate, and head sheet are all of one-piece construction

apron.

304 stainless steel formed longitudinals – 7-gauge inner & 7-gauge outer.

One-piece 3/16" AR400 steel conveyor floor positioned 12-1/2" above the chassis frame rails.

28" wide center conveyor extending beyond the tailgate which allows for a vertical feedgate. The standard conveyor has 1/2" x 1-1/2" crossbars welded to Feedgate is pin adjustable and has 8 positions to vary discharge rates.

Conveyor idler and drive shafts are 2" diameter and equipped with 8-tooth drop forged steel sprockets.

Dual pancake type air tailgate latch with dual over-center linkage. (Valve is not

Single acting, trunnion mount, nitrided telescopic hoist with 2 year warranty.

8" x 6" x 1/2" structural angle rear hinge assembly with 2" diameter 300 series stainless steel pins through 2-1/2" hinge blocks.

Cylinder mounts and hinge blocks are equipped with grease fittings.

Body is equipped as standard with sloped fenders.

All 304 stainless steel is left unpainted. Non-304 stainless steel components are painted black.

Item #	Information Requested	Answer
8.0	Sander - Make and Model	HI-WAY XZALT SERIES
	Auger size	NONE - - CONVEYOR TYPE
	Type of Sander	Precision Placement, V-Box Style sander, for both Granular & Liquid Application

304 stainless steel construction, the standard body width is 82".

The Xzalt is able to uniformly spread granular materials alone or blended with liquid at a width of up to a 36 feet wide.

The main support frame is coated with a hot dipped zinc galvanized finish for longer life with minimal maintenance.

"Endless" design straight belt conveyor system installed over a stainless steel bottom panel provides for a low maintenance conveyor system capable of spreading most granular materials.

The idler roller and take-up mechanism is complete stainless construction with sealed bearings, providing for low maintenance costs.

The drive assembly consists of a 6:1 spur gear case providing 98% hydraulic efficiency, for lower operating and maintenance costs.

The drive drum consists of a stainless shaft and drum assembly connected to the gear case through a stainless steel coupling. Positive drive, to the belt, is provided through the vulcanized rubber covering on the drum.

All high wear items, such as the metering gate, spinner chute and spinner disk are stainless steel construction on both carbon and stainless steel bodies.

The stainless steel metering gate has three discharge settings. No operator input or adjustment is required for rate application.

This provides for a constant and highly accurate rate of discharge for all granular material.

The directional spinner is vertically adjustable from 12" to 20" above the road

Liquid tanks with 2" fill port, and dual cross over hoses provide for quick loading and unloading of tanks.

Hydraulic and electrical controls protected in stainless steel enclosure.

The standard unit is equipped with domed galvanized screens - opening size of 4" x 4".

The standard unit is equipped with a rear mounted fold-up inspection ladder.
