3 Point Hitch Mounted Boom Mower

This 3 point hitch mounted boom mower is a universal and can attach to most of MNDOT's owned and rented tractors, thus better utilizing equipment. When small nuisance brush isn't maintained on a regular basis it can obstruct views of signs and create other sight line issues. Small trees grow into larger trees that become serious hazards for vehicles that leave the roadway. This brush cutter will allow crews to better maintain its right of way's with a smaller investment than a dedicated brush cutter. District 1 maintenance crews will evaluate this unit for its versatility, durability and overall effectiveness and ability to clear brush.
