## Description

Have you ever noticed that after plowing at night, your eyes start to hurt or you begin to get headaches? Chances are, it is due to the strobes on the cab guard reflecting light off of your mirrors and into the cab. This simple, but affective shield will help relieve some of that. The maintenance crew from the Baudette Truck Station came up with this idea and has been using it since. The plate that is used to reflect the light coming off of the strobes measure roughly 20" X 12". Anyone can re-create this attachment with very little time and money.
